SUMMARY

Ontario Tech University Bachelor of Engineering (Honours)(Co-op) student seeking the Toronto Hydro Senior Technical Student (14328) role. I bring hands-on technical experience from an automotive service co-op, where I supported inspections, routine servicing, diagnostics, and shop operations while following strict safety procedures and industry standards. With proficiency in MS Excel, Microsoft Word, and Microsoft Project, I offer a detail-oriented, organized approach to technical documentation, project support, and field verification.

SKILLS

• Built over 30 SolidWorks models for Intro To Engineering/Design Project 2 and Concurrent Engineering/Biweekly Design Project #1, delivering CAD for two coursework projects.

• Built Cardlife and PrometheusGrapher in Visual Studio Code, using Git/GitHub and Visual Studio to manage revisions and maintain independent build workflows.

• Applied C++, Python, JavaScript, Matlab, and Maple across coursework and coding practice to solve programming, analysis, and technical problems.

• Used MS Excel, Microsoft Word, Microsoft Project, and Google Suite to organize assignments, track schedules, and prepare project materials for coursework and team deliverables.

• Collaborated on over 5 group projects and event setups, relying on teamwork, organization, time management, independence, and attention to detail to keep work on schedule and research technical topics thoroughly.

• Created and Organized Group Presentations, using the Google Suite. Along with ensuring proper communication on group practice sessions ensuring everyone is set for public speaking.

EDUCATION

Bachelor of Engineering (Honours)(Co-op) 2030

Ontario Tech University

- Completed coursework in Concurrent Engineering And Design, Thermodynamics, and Differential Functions to strengthen core engineering fundamentals.

Ontario Secondary School Diploma 2025

Ajax High School

- Completed Technical Design coursework that built hands-on drafting and design fundamentals.

PROJECTS

Intro To Engineering/Design Project 2

Solidworks-based introductory engineering/design project.
• Modeled and refined a Solidworks design for introductory engineering coursework.

Concurrent Engineering/Biweekly Design Project #1

Solidworks-based concurrent engineering design project.
• Built Solidworks for recurring biweekly design deliverables ensuring deadlines are met.

Concurrent Engineering/Case Study #1 2026-09 - 2026-10

Investigative Research Case Study on the concurrent engineering between the Airbus A380 and Boeing 777
• Researched engineering problems with each aircraft and the processes behind their design.
• Communicated researched ideas in an effective manner ensuring proper understanding and retention of material.

Personal Project/Cardlife January 2026

Personal project built in Visual Studio Code with Git/GitHub.
• Built Cardlife in Visual Studio Code and managed revisions with Git/GitHub allowing for a more organized workflow.
• Identified and problem solved logistical issues with original project
• Reworked core input code allowing for easier use of firmware and fixed multiple logic issues with the original project.

Personal Project/PrometheusGrapher September 2026

Personal project built in Visual Studio Code with Git/GitHub.
• Built PrometheusGrapher in Visual Studio Code and tracked source changes with Git/GitHub throughout development.
• Built firmware from scratch, implement efficient rendering componenets.

EXPERIENCE

Automotive Service Technician Co-op Student September 6, 2023 - February 1, 2024

Ajax Nissan, Ajax, ON

- Built hands-on experience in vehicle maintenance and repair while supporting a safe, steady workflow under licensed technicians.
- Coordinated inspections, routine servicing, and diagnostics support to keep shop work organized and moving efficiently.
- Maintained shop operations by preparing work areas, following safety procedures, and upholding industry standards during each shift.
- Collaborated with licensed technicians on shared tasks and completed assigned work reliably and independently under supervision.
- Handled repetitive shop tasks to keep operations moving without slowing critical work.
